SOFTWARE FOR MATERIALS ™

Innovations to boost
PROFITABILITY

Finortec Oy is a Finnish software company established in 1993. The company develops and markets enterprise resource planning and production control systems for the flat glass industry and material use optimization software for the panelboard and profile cutting industries.

Finortec Oy has a total of more than 300 customers in Finland, Scandinavia and the Baltic Countries. The company is an independent software supplier with no affiliation with machine manufacturers.

Precut products are developed for the following sectors:
- **flat glass processing and glazing**
- **wood-based panel processing, panelboard and furniture industry**
- **metal sheet and profile processing**
- **plastic sheet and profile processing**
- **marble and stone processing**
- **window and facade industry**

Finortec Oy has undergone continual development of its products together with its customers for over ten years. The Precut product range provides software products designed to serve the individual needs of both small and large-sized enterprises within their own specific business sectors.

Tighten up Production – Improve Performance:

- improved profitability
- increased production efficiency
- trouble-free production planning
- reduced material waste
- improved standard of quality
- enhanced company image and strengthened customer confidence

Precut systems can be expanded flexibly

Due to their modular structure and diverse parameter management features, Precut products can be adapted to correspond to the individual needs of Your company. The software can also be easily integrated into other company systems. Usability and adaptability to personal requirements are maximised by the editability of the software's user interfaces.

Precut – flexible, long-term solutions for production efficiency and automation development.

User Training, Product Support and Maintenance Services in a single package

The installation schedule, including each phase of system start-up, is planned in advance with the Customer. We also provide a clear, itemized cost estimate for the project beforehand. All planning, specifications and technical implementation of the project will be handled by an expert familiar the special needs of Your field.

In addition to the software, the whole package solution also includes User Training, Product Support Services and Maintenance Services.

Precut Data Processing Systems

Precut Glass Industry – an enterprise resource planning system developed to meet the needs of the flat glass processing industry. The system can be used to manage production operations for flat glass, insulating glass, laminated glass as well as bended glass processing companies.

Precut Glazing – a production and financial management software program developed for glazing businesses and small-scale flat glass and plastic sheet processing industries.

Precut Panelboard Industry – a software program developed for cut-to-size optimization, machine tool control and cost accounting and tender calculation for the panelboard and furniture industry and wholesale cut-to-size businesses.

Precut Woodworking – a cut-to-size production optimization software program developed for the small-scale wood-based panel processing industry.

Precut Profile – designed for the optimization of profile cutting of aluminium, plastic, wood and steel profiles in a range of sectors.
